PROFILE

Recent Information Systems graduate from King Abdulaziz University with hands-on experience across the data analysis lifecycle — data cleaning and feature engineering in Python, interactive Power BI dashboards, and machine learning classification. Skilled at turning raw datasets into clear, decision-ready insights.

EDUCATION

Bachelor of Information Systems | *King Abdulaziz University* 08/2021 – 08/2026
Graduated: August 25, 2026

EXPERIENCE

Linux Administrator Intern | *CEHPC – King Abdulaziz University* Jun 2025 – Aug 2025

- Completed 8-week internship (240 hrs) covering Linux administration, Bash scripting, network configuration, virtualization, and cluster management on the Aziz Supercomputer.
- Built a mini cluster using Bash scripting as the capstone project.

PROJECTS

Coffee Shop Sales Analysis | *Python, Pandas, Power BI, DAX* [Completed]

- Cleaned and engineered a coffee chain's transactional data in Python (Pandas), then built an interactive Power BI dashboard with KPI cards, revenue trends, and peak-hour analysis across stores and categories.
- Implemented DAX measures for category revenue share, weekend split, and morning peak performance, with dynamic slicers for real-time filtering.

AI Algorithms & Fake News Attention Analysis | *Python, Scikit-learn, Streamlit, Plotly* [Completed]

- Designed and deployed a Streamlit dashboard (team of 5) analyzing how AI recommendation algorithms affect attention span and fake-news spread across social platforms; built a Random Forest model to predict fake-news risk by user behavior profile.

Car Insurance Risk Classification | *RapidMiner, Data Mining* [Completed]

- Compared preprocessing techniques (normalization, imputation, discretization, dimensionality reduction) and classifiers on a 205-record dataset using 10-fold cross-validation.
- Identified Random Forest as the top performer at 96.57% accuracy, up from a 91.21% Decision Tree baseline.

Esports World Cup 2024 Performance Analysis | *Power BI, DAX* [Completed]

- Built a multi-page Power BI dashboard analyzing team and match performance across five games, with geographic attendance mapping, team rating comparisons, and dynamic filtering.

KAU-ESPORTS | *Flutter, Python, Firebase* [Completed – Graduation Project]

- Mobile esports tournament app with a Python-based AI feature that analyzes player profiles to generate performance insights.

SKILLS

Programming & Analysis: Python, Pandas, NumPy, Scikit-learn, SQL, DAX

BI & Visualization: Power BI, Streamlit, Plotly, Excel

Data Mining & ML: RapidMiner, Decision Trees, Random Forest, Neural Networks, Naive Bayes, Cross-Validation

Data Preparation: Data Cleaning, Missing Value Imputation, Normalization, Discretization, Dimensionality Reduction, EDA, Feature Engineering

Soft Skills: Problem Solving, Teamwork & Collaboration, Communication, Critical Thinking, Time Management, Attention to Detail

COURSES & CERTIFICATIONS

- Microsoft Power BI Data Analyst (PL-300) – In Progress
- AI Agent Engineering
- Machine Learning Professional Certification – RapidMiner (Altair)
- Data Engineering Professional Certification – RapidMiner (Altair)
- Probability & Statistics for Machine Learning & Data Science – DeepLearning.AI (Coursera)
- Data Analysis Using Python Bootcamp – Saudi Digital Academy (SDA the Hub)
- Data Analysis Bootcamp – Hash Plus (30 hrs; Power BI, Python, Excel)
